CLINICAL HAEMATOLOGY DISCHARGE SUMMARY

Patient Name: Mrs. SETHI HARJEET

Date Of Birth: 01/04/1959

Visit Code: IP0006

Created Date: 13/06/2026

Ward/Bed No: 7 B - 711

Date of Admission: 10/06/2026

Date of Discharge: 13/06/2026

Discharging Status: FOLLOW UP DISCHARGE
SUMMARY

MRD#: 1383616

Sex: Female

Speciality: CLINICAL HAEMATOLOGY

Consultant: Dr. MELINKERI SAMEER

Blood Group: A NEG

DIAGNOSIS :

1. Bernard-Soulier Syndrome
2. Recurrent gastrointestinal bleeding (melena) secondary to intestinal telangiectasias
3. Chronic anemia due to recurrent GI blood loss
4. Hypertension

DRUG ALLERGIES:

Not known

HISTORY OF PRESENT ILLNESS:

Known case of Bernard-Soulier Syndrome (BSS) with associated thrombocytopenia, hypertension, and chronic anemia, currently on Thalix (thalidomide) 50 mg once daily. The patient has a significant history of recurrent gastrointestinal bleeding, with a major episode of profuse bleeding in October 2025. Previous upper and lower gastrointestinal endoscopic evaluations failed to identify a definite bleeding source; however, an RBC-tagged scan suggested a distal small bowel source of bleeding. The patient now presents with melena for the last 7 days, occurring approximately 2-3 episodes daily. There is no history of fresh blood per rectum, fever, chest pain, palpitations, or breathlessness. The patient remains hemodynamically stable. There is associated bilateral pedal edema. Examination reveals mild pallor, with no hepatosplenomegaly or lymphadenopathy. Laboratory investigations show hemoglobin 8.3 g/dL, total leukocyte count 4,400/ μ L, and platelet count 38,000/ μ L. Renal function is preserved (urea 30 mg/dL, creatinine 0.85 mg/dL), and serum uric acid is 7 mg/dL. The patient has been admitted for evaluation and management of ongoing melena in the setting of Bernard-Soulier syndrome and recurrent gastrointestinal bleeding.

CLINICAL EXAMINATION:

Systemic examination-NAD

COURSE IN THE HOSPITAL AND DISCUSSION:

Mrs. Harjeet Sethi, a known case of Bernard-Soulier Syndrome with recurrent gastrointestinal bleeding and hypertension, was admitted with complaints of melena for 7 days (2-3 episodes daily) associated with anemia. On admission, hemoglobin was 8.3 g/dL and platelet count was 38,000/cumm. Previous evaluation had suggested a distal small bowel source of bleeding, likely intestinal telangiectasias. During hospitalization, she was managed jointly by Hematology and Gastroenterology teams. She received recombinant factor VIIa (NovoSeven) for recurrent episodes of melena, along with supportive care, octreotide, intravenous iron supplementation, and continuation of

Thalix therapy. Intermittent episodes of melena were noted during the initial hospital stay; however, there was gradual clinical improvement with no further bleeding during the last 24 hours prior to discharge. Hemodynamically she remained stable throughout admission. Hemoglobin remained stable around 8.8–9 g/dL at discharge. She is being discharged in stable condition with advice for regular follow-up.

PLAN ON DISCHARGE:

Follow up with Dr. Sameer Melinkeri sir with CBC reports on 18 / 6 / 2026

at Clinical Hematology department, Deenanath Mangeshkar Hospital, Annex Building, Ground floor with prior Appointment.

Contact No.: 020-40151100

Follow up with Dr. Harshal Gadhikar sir after 1 week with CBC in the OPD

DISCHARGE PRESCRIPTION:

Tab Thalix 50mg 0-1-0 to continue

Tab Pan 40mg 1-0-0 to continue

Tab Emeset 4mg SOS for vomiting

Tab Colospa R 1-0-1 to continue for 3 days then stop

Tab Revolol AM 1-0-0 to continue till follow up

Inj Octreotide 100mcg 1-0-1 for 15 days then stop

ADVICE ON DISCHARGE:

In case of emergency please come to DMH ER 1 (Emergency Room). It is open 24 hours a day.
Phone no.: 020-4015-1027 / 1065.

In case of Fever/ Bleeding/Cough/Breathlessness please report back to the Hospital.

DIET RECOMMENDATIONS:

Home cooked food

PHYSICAL ACTIVITY:

as individually tolerated

Special needs

PICC line dressing:

NA
